

1.Project Name

TYRANNO — SPECULATIVE COMMUNICATION SYSTEM

Year

2025–2026

Category

Speculative Design / Visual Communication Systems / Narrative Interaction

My Role

Speculative Communication Designer
Visual System Developer
Narrative World-builder

Project Overview

TYRANNO is a speculative communication project exploring how visual language systems could enable interaction between humans and Tyrannosaurus Rex within a future urban environment.

Combining semiotics, experimental typography, narrative world-building, and interaction design, the project investigates communication beyond human-centered linguistic structures.

Core Concept

A future-oriented communication system exploring interactions between humans and Tyrannosaurus Rex within a speculative urban environment.

The project investigates how semiotics, experimental typography, and visual language systems can construct cross-species communication frameworks through narrative-driven world-building.

Context / Question

How might communication evolve when language must bridge radically different species, cognitive systems, and physical behaviors?

The project questions whether visual symbols, gestures, and narrative environments can function as alternative communication infrastructures in a speculative future society.

Concept Development

The project was developed as a narrative-driven communication ecosystem rather than a traditional typeface design project.

By combining symbolic structures, behavioral references, and speculative world-building, TYRANNO constructs a future-oriented visual language system designed around non-human perception, movement, and interaction patterns.

The communication system integrates:

- symbolic glyph construction
- behavioral semiotics
- environmental storytelling
- interaction-based communication logic

What I Actually Did

- Developed a speculative visual language system based on semiotic structures and symbolic communication
- Constructed a typography-driven communication framework for human–T.Rex interaction
- Designed narrative environments and future communication scenarios
- Conducted interdisciplinary research combining speculative design, paleontology references, and communication theory
- Designed interaction concepts and digital storytelling experiences for an interactive web-based platform
- Built visual consistency across symbols, typography, narrative structures, and interface systems

Research / Process

The development process combined:

- semiotic research
- experimental typography studies
- speculative communication theory
- paleontology-inspired behavioral analysis
- visual system prototyping

The project involved constructing symbol classifications, communication hierarchies, interaction scenarios, and visual narrative structures.

Research materials included:

- glyph experimentation
- communication flow diagrams

- symbolic modular systems
- interaction mapping
- speculative environmental studies

Final Outputs

- Experimental typography system
- Symbolic communication structures
- Narrative world-building framework
- Interactive communication concepts
- Digital storytelling prototypes
- Speculative visual identity system

Final Outcome

The final outcome included:

- a speculative typography system
- symbolic communication structures
- narrative world-building assets
- interaction concepts for digital experiences
- visual identity systems
- communication prototypes for an interactive web platform

Reflection

TYRANNO became an exploration of communication as a system rather than language as text alone.

The project expanded the understanding of how narrative, behavior, environment, and symbolism can collectively construct communication frameworks beyond conventional human-centered design logic.

It also reinforced the potential of speculative design as a tool for questioning future relationships between humans, technology, and non-human entities.

2.Project Name

THE INFINITE DISCUSSION — MACHINE VISION EXHIBITION NARRATIVE

Year

2025

Category

Speculative Media / Exhibition Narrative / Immersive Communication

My Role

Exhibition Narrative Designer

Creative Producer

Audiovisual Storytelling Developer

Project Overview

The Infinite Discussion is a speculative exhibition project exploring machine-human communication through AI-generated dialogue systems, immersive audiovisual storytelling, and narrative-based media environments.

The project examines how artificial intelligence reshapes communication, interpretation, and emotional interaction within future digital cultures.

Core Concept

A speculative exhibition project exploring machine-human communication through AI-generated dialogue systems, immersive storytelling, and audiovisual narrative environments.

The project examines how machines interpret, reproduce, and reshape human communication behaviors within future media ecosystems.

Context / Question

As machine-generated content increasingly participates in human communication, how might dialogue evolve when interpretation is no longer exclusively human?

The project explores the boundaries between machine cognition, human emotion, and mediated communication systems.

Concept Development

The exhibition was developed as an immersive communication environment centered around speculative dialogue structures.

Instead of presenting AI as a tool, the project approached machine intelligence as an active participant in communication ecosystems.

The narrative framework combined:

- machine-generated dialogue
- audiovisual storytelling
- speculative media environments
- fragmented conversational structures
- immersive spatial communication

What I Actually Did

- Developed the overall exhibition narrative and speculative communication framework
- Created machine-human dialogue structures and conversational narrative systems
- Produced audiovisual content for immersive exhibition experiences
- Constructed speculative media environments exploring AI communication dynamics
- Coordinated visual storytelling across motion, sound, dialogue, and spatial narrative elements
- Designed communication flows connecting audience interaction and machine-generated responses

Research / Process

The development process included:

- research into AI-generated communication systems
- exploration of speculative media theory
- narrative scripting
- audiovisual sequencing
- dialogue construction experiments

The project also involved building communication flows between audience interaction, machine-generated responses, and spatial storytelling elements.

Research outputs included:

- dialogue mapping
- speculative scripts
- motion experiments
- sound-image synchronization

- immersive narrative sequencing

Final Outputs

- Exhibition narrative framework
- Audiovisual installation content
- AI-generated dialogue systems
- Speculative media storytelling
- Motion-based exhibition visuals
- Immersive communication concepts

Final Outcome

The final outcome included:

- a speculative exhibition narrative
- audiovisual installation content
- AI-generated dialogue systems
- immersive storytelling environments
- motion-based visual narratives
- machine-human interaction concepts

Reflection

The project revealed how communication increasingly exists within hybrid systems shaped by humans, machines, interfaces, and algorithmic interpretation.

Rather than presenting technology as purely functional, the exhibition explored AI as a narrative and emotional medium capable of reshaping future communication experiences.

3.Project Name

AUDI INTEGRATED BRAND COMMUNICATION PROJECTS

Year

2020–2022

Category

Creative Production / Integrated Campaign Communication / Luxury Brand Experience

My Role

Creative Communication Coordinator

Creative Production Coordinator

Integrated Campaign Support

Project Overview

A series of integrated automotive communication projects developed across livestream campaigns, vehicle launches, experiential brand events, and luxury communication initiatives.

The work focused on translating automotive brand narratives into cohesive visual and experiential communication systems through creative production and cross-functional collaboration.

Selected cases included:

- AudiChannel livestream campaigns
- Audi A8L Horch Global Premiere
- Audi x Ryuichi Sakamoto collaboration

Core Concept

Coordinated integrated communication campaigns and creative production processes for automotive brand experiences across livestreams, vehicle launches, exhibitions, and experiential communication projects.

The work focused on translating brand narratives into cohesive visual and experiential communication systems.

Context / Question

How can luxury automotive communication evolve beyond product-centered marketing into narrative-driven brand experiences?

The projects explored how storytelling, visual coordination, and experiential communication can strengthen audience engagement across digital and physical platforms.

Concept Development

The communication approach focused on integrating:

- cinematic storytelling
- visual communication systems
- experiential branding
- livestream communication
- audience-oriented narrative structures

Rather than treating campaigns as isolated outputs, the projects were approached as interconnected communication ecosystems spanning production, narrative, and brand perception.

What I Actually Did

- Coordinated creative production workflows across clients, creative teams, suppliers, and execution teams
- Developed communication proposals, narrative structures, and visual references for automotive campaigns
- Participated in scriptwriting and narrative sequencing for livestream and campaign-based communication
- Managed production timelines, asset coordination, and on-site execution for live events and exhibitions
- Supported visual communication consistency across integrated campaign touchpoints
- Coordinated photographers, production vendors, celebrities, and multi-department collaborations
- Contributed to projects including AudiChannel livestream campaigns, Audi A8L Horch global premiere, Audi RS collaborations, and automotive exhibitions

Research / Process

The projects involved:

- communication proposal development
- visual reference research
- narrative scripting
- production coordination
- campaign sequencing

- cross-functional collaboration
- on-site execution management

The process required collaboration between:

- clients
- creative teams
- photographers
- production vendors
- livestream teams
- celebrity management
- execution teams

Selected project contributions included:

- narrative sequencing for AudiChannel livestreams
- luxury launch communication support for Audi A8L Horch
- experiential narrative coordination for Audi x Ryuichi Sakamoto

Final Outputs

- Integrated livestream campaigns
- Automotive launch communication assets
- Experiential brand events
- Narrative-driven campaign presentations
- Visual communication proposals
- Production coordination systems

Final Outcome

The final outcomes included:

- integrated livestream campaigns
- automotive launch communication assets
- experiential brand activations
- narrative-driven presentations
- visual communication proposals
- large-scale live event coordination

Several campaigns achieved large-scale audience engagement across livestream and social media platforms.

Reflection

These projects reinforced the importance of narrative consistency across complex communication ecosystems.

Working across production, creative coordination, and brand communication revealed how storytelling, timing, and experiential design collectively shape audience perception within luxury communication environments.

The experience also strengthened the understanding of creative production as a bridge between concept development and real-world execution.

Experiential Marketing

4.Project Name

DEEAR MAGAZINE

Year

2024–2025

Category

Editorial Design / Publication Systems / Narrative Communication

My Role

Editorial Visual Designer
Publication Layout Designer

Project Overview

Dear Magazine is an editorial publication project exploring identity, migration, emotional memory, and queer narratives through contemporary publication design systems.

The project investigates how editorial structures can shape emotional pacing, narrative rhythm, and visual storytelling experiences.

Core Concept

An editorial publication project exploring identity, migration, emotional narratives, and queer storytelling through contemporary publication design systems.

The project focused on constructing emotionally-driven reading experiences through typography, layout rhythm, and visual narrative consistency.

Context / Question

How can editorial design communicate emotional and cultural narratives beyond textual content alone?

The project explores publication design as a narrative system where typography, sequencing, imagery, and spatial rhythm collectively construct meaning.

Concept Development

The publication was developed around emotionally-driven editorial storytelling.

Rather than prioritizing decorative layout design, the project focused on creating visual pacing systems capable of supporting fragmented narratives, personal memories, and identity-based storytelling.

The design system integrated:

- typography hierarchies
- visual sequencing
- spatial rhythm
- image-text relationships
- publication consistency

What I Actually Did

- Designed editorial layouts and publication systems across multiple spreads
- Developed typography hierarchies and visual pacing strategies
- Processed and integrated visual materials into cohesive editorial narratives
- Maintained publication consistency across graphic and textual content
- Contributed to emotionally-driven storytelling through editorial sequencing and visual rhythm
- Supported narrative communication through layout composition and publication structure

Research / Process

The process included:

- editorial layout experimentation
- typography studies
- publication sequencing
- narrative pacing analysis
- image integration systems
- visual consistency development

Research focused on how emotional tone and narrative fragmentation could be translated into editorial structures and reading experiences.

Final Outputs

- Editorial publication layouts
- Typography systems
- Narrative-driven magazine spreads
- Publication design system
- Visual storytelling compositions

Final Outcome

The final outcome included:

- editorial publication layouts
- narrative-driven magazine spreads
- typography systems
- publication design frameworks
- visual storytelling compositions

Reflection

The project expanded the understanding of editorial design as a form of narrative architecture rather than static page composition.

It demonstrated how typography, pacing, and layout systems can shape emotional engagement and construct layered communication experiences within contemporary publishing contexts.

Visual Keywords

Editorial Narrative / Typography Systems / Contemporary Publication Design / Emotional Storytelling / Layout Rhythm / Visual Sequencing / Cultural Narratives

5.Project Name

MADAM, IN EDEN, I’M ADAM

Year

2023-2024

Category

Conceptual Photography / Visual Storytelling / Narrative Imagery

My Role

Visual Storytelling Director
Photography Art Direction
Post-production Editor

Project Overview

Madam, in Eden, I’m Adam is a conceptual photography project exploring identity, symbolic narrative, body language, and emotional tension through cinematic visual storytelling.

The project investigates how staged imagery and visual symbolism can communicate psychological and interpersonal narratives beyond verbal language.

Core Concept

A conceptual visual storytelling project exploring symbolic identity, body language, and cyclical narrative structures through staged photography and visual semiotics.

The project investigates emotional and psychological narratives through carefully constructed visual symbolism and cinematic image sequencing.

Context / Question

How can visual narratives communicate emotional complexity through symbolism, gesture, and spatial relationships rather than explicit storytelling?

The project explores photography as a narrative system capable of constructing layered emotional and symbolic meaning.

Concept Development

The project was developed around cyclical narrative structures, symbolic imagery, and staged visual composition.

The visual language focused on:

- body movement
- environmental symbolism
- emotional atmosphere
- visual repetition
- cinematic pacing
- symbolic spatial relationships

The photographic narrative was approached as a sequence-based storytelling system rather than a collection of isolated images.

What I Actually Did

- Developed the visual storyboard and narrative structure for the photographic series
- Directed and executed staged photography processes
- Participated as photographic subject within the narrative framework
- Edited and color-graded final images to maintain visual consistency and emotional atmosphere
- Constructed symbolic visual relationships through composition, gesture, and environmental storytelling
- Coordinated narrative pacing across image sequencing and post-production

Research / Process

The process included:

- storyboard development
- symbolic narrative mapping
- visual composition studies
- staged photography direction
- color grading experiments
- cinematic sequencing analysis

The project also involved balancing performance, photography direction, and post-production consistency to maintain narrative cohesion across the image series.

Final Outputs

- Conceptual photography series

- Narrative visual sequencing
- Cinematic image compositions
- Color-graded visual storytelling assets
- Symbolic photography narratives

Final Outcome

The final outcome included:

- a conceptual photography series
- cinematic image sequencing
- symbolic visual narratives
- color-graded storytelling compositions
- emotionally-driven visual storytelling assets

Reflection

The project highlighted how visual storytelling can communicate emotional and psychological narratives through atmosphere, gesture, and symbolic composition rather than explicit explanation.

It reinforced the understanding of photography as a narrative communication system shaped by sequencing, rhythm, and visual tension.
